

Vinith Kumar Gudibanda Prasannakumar

AI Engineer | Python Developer | Data Analytics | Machine Learning | Agentic AI & RAG
089 244 1008 | vinithvkk050@gmail.com | github.com/Vinithvk98 | [Portfolio](#) | Dublin, Ireland

SUMMARY

AI engineer and Python developer with 5+ years of production experience building agentic AI systems, RAG architectures, scalable backend services, and ML workflows. Hands on with LangGraph, LangChain, MCP, OpenAI API, Claude API, Hugging Face, AWS, FastAPI, and Docker, with disciplined engineering practice including 85%+ PyTest coverage and GitHub Actions CI/CD. Adept at translating ambiguous business problems into production-grade AI and data solutions and communicating results clearly to both technical and non-technical stakeholders. MSc in Data Analytics (Machine Learning and AI), National College of Ireland, Dublin.

AREAS OF EXPERTISE

- Agentic AI:** LangGraph | LangChain | MCP Server Development | Multi-Agent Orchestration | RAG Pipelines | Embedding & Vector Retrieval | LLM Evaluation | OpenAI API | Claude API | Hugging Face
- Python & Backend:** Python (Advanced) | FastAPI | Flask | OOP | Async | Pydantic | REST API Design | Microservices | scikit-learn | XGBoost | TensorFlow | Keras
- Cloud & DevOps:** AWS (Lambda | EC2 | S3 | API Gateway | DynamoDB | CloudWatch) | AWS CDK | Docker | GitHub Actions (CI/CD) | PyTest (85%+) | Structured Logging
- Data:** SQL (Advanced) | PostgreSQL | MongoDB | Power BI | DAX | Data Pipelines | Feature Engineering | Anomaly Detection | Stakeholder Reporting

EDUCATION

MSc in Data Analytics | National College of Ireland, Dublin **2023 - 2024**
Machine Learning and AI | Applied Predictive Analytics | Cloud Computing | Database Design | Data Mining and Statistical Analysis

WORK EXPERIENCE

Data and Insights Analyst - Nando's Ireland, Dublin **May 2024 - Present**

- Monitor and analyse 5 operational dashboards daily covering sales, labour, cost, and customer metrics, tracking 10+ KPIs to surface performance trends and flag anomalies to management before they escalate.
- Identify 3 to 4 recurring performance gaps per quarter through structured trend and variance analysis, delivering targeted recommendations that contribute to measurable improvements in operational efficiency.
- Conduct weekly sales forecasting and actuals-vs-targets analysis across multiple revenue streams, using AI tools and automation to accelerate analytical workflows and enable more accurate staffing and cost-control planning.
- Translate complex data patterns into concise, stakeholder-ready insights during weekly stand-ups, directly influencing operational and resourcing decisions with management and operations leads.

Senior Python and AI Engineer - Infidata Technologies, India **Jan 2021 - Dec 2022**

- Built and deployed AI-powered workflows and intelligent assistants using GPT-based APIs and Hugging Face transformer models on AWS, integrating with live APIs and legacy data systems on a financial platform processing 10M+ daily transactions.
- Designed custom Python orchestration pipelines for multi-step AI workflows, custom embedding and vector retrieval pipelines using RAG-like architectures, and evaluation frameworks with structured logging and scenario-based testing.
- Partnered with product, data science, and engineering teams to scope and deliver AI solutions, translating ambiguous requirements into measurable deliverables and presenting design decisions in architecture reviews.
- Maintained 85%+ PyTest coverage and CI/CD via GitHub Actions and Docker, reducing release cycle time by 40%; fraud decisioning system reduced operational overhead by 50% and false positives by 25%.

Junior Python Engineer - Infidata Technologies, India **Jul 2019 - Dec 2020**

- Built REST API endpoints, data ingestion pipelines, and Python automation scripts within Agile squads on PostgreSQL and AWS infrastructure, contributing to shared libraries with unit tests and PR-based code review.
- Optimised SQL queries and indexing strategies across high-volume PostgreSQL databases, reducing critical query execution time by 35%.
- Supported deployment and monitoring of production AI and backend services on AWS, building observability and alerting fundamentals alongside senior engineers.
- Participated in sprint planning, code reviews, and technical documentation, building strong software engineering and cross-functional collaboration fundamentals.

PROJECTS

AI Agent Orchestration Platform with RAG, MCP, and Evaluation Harness **Personal & MSc Project**
Python | LangGraph | LangChain | OpenAI API | Claude API | Hugging Face | MCP | RAG | AWS

- Designed and deployed a production multi-agent AI system with LangGraph orchestration, MCP server integrations connecting agents to live APIs and data systems, RAG pipelines with optimised vector retrieval, and a comprehensive evaluation harness combining deterministic tests and LLM-as-judge scoring - validated and deployed on AWS.

High Volume Fraud Decisioning Engine **Infidata Technologies**
Python | FastAPI | PostgreSQL | AWS Lambda | API Gateway | DynamoDB | Docker | GitHub Actions | PyTest

- Built and deployed a real-time AI decisioning service processing 10M+ daily transactions on AWS Lambda with API Gateway, DynamoDB, structured audit trails, and CloudWatch monitoring, reducing operational overhead by 50%, false positive rate by 25%, and release cycle time by 40%.
